### **DETAILED ACTION**

1. This office action is in response to the application filed May 22, 2001.

#### ***Drawings***

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "guard ring" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

#### ***Specification***

3. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

#### ***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 53-55 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is not clear what is meant by the following: a) "gate conductor guard ring" (See Claim 53); and b) "stringer" (See Claim 53). Claims 54-55 depend directly or indirectly from a rejected claim and are, therefore, also rejected under 35 U.S.C. 112, second paragraph for the reasons set above.

***Claim Rejections - 35 USC § 103***

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 53-56, as far as understood, are rejected under 35 U.S.C. 103(a) as obvious over Schrems et al. (U.S. Patent No. 5,945,704).

In regards to claim 53, Schrems et al. ("Schrems") discloses the following:

a) at least one support region and at least one array region, said array region and said support region being separated by an isolation region (See Figure 1 and Column 3 Lines 28-33).

In regards to claim 53, Schrems fails to disclose the following:

a) at least a gate conductor guard ring formed around said array region on top of said isolation region, wherein said gate conductor guard ring prevents trapping of a stringer of polysilicon on said isolation region.

In regards to claim 54, Schrems discloses the following:

a) array region includes a plurality of DRAM cells embedded in a semiconductor substrate (See Figure 1 and Column 3 Lines 28-30).

In regards to claim 55, Schrems discloses the following:

a) wordlines (120) overlay each of said DRAM cells and a bitline (185) overlays said wordlines (See Figure 3).

In regards to claim 56, Schrems discloses the following:

a) each of said DRAM cells are vertical DRAMs (See Figure 1).

Art Unit: 2822

8. Claims 57-59, as far as understood, are rejected under 35 U.S.C. 103(a) as obvious over Schrems et al. (U.S. Patent No. 5,945,704) in view of Yeh et al. (U.S. Patent No. 5,897,371).

In regards to claim 57, Schrems discloses the following:

a) one support region having a local interconnect formed therein and at least one array region having at least one wordline formed therein, said at least one array region and said at least one support region are separated by an isolation region (See Figure 1 and Column 3 Lines 28-33).

In regards to claim 57, Schrems fails to disclose the following:

a) at least one wordline and said local interconnect are comprised of identical material.

However, Yeh et al. ("Yeh") discloses a wordlines and interconnects made of the same material (See Column 3 Lines 39-45). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the semiconductor device of Schrems to include wordlines and interconnects made of the same material as disclosed in Yeh because it aids in lowering contact resistance.

In regards to claim 58, Schrems discloses the following:

a) array region includes a plurality of DRAM cells embedded in a semiconductor substrate (See Figure 1 and Column 3 Lines 28-30).

In regards to claim 59, Schrems discloses the following:

a) each of said DRAM cells are vertical DRAMs (See Figure 1).
